

I am choosing to PAY for Sat. radio because it has local traffic and weather for my 85 mile each way commute to work. This commute is done on the always accident prone Los Angeles freeways system. The best local station has traffic reports about every 6 minutes. But it only gives one half or less of the freeway system forcing me to listen to their "crap" for nearly 30 minutes or more to be sure I got the whole picture. How can not allowing Sat. radio to continue this service be in the public interest? This is a no brainer.. Please stop handicapping this new technology(like the FCC did to Sat TV) with the trumped-up bull thrown up by dinosaur radio people. I know NAB is a big, powerful and very well funded monster but do the right thing for the people.
